## TSPi Test Log Instructions - Form LOGTEST

Purpose	1	The test log contains a summary of the tests run and the results
		obtained.
	-	With the test log data, you can readily determine which tests were
		run and which found the most defects.
	-	You can also determine the test run time and the defects found
		per testing hour.
	-	Data from this log can help you select the most efficient strategy
		for regression testing modified programs.

Use the log to track all unit, integration, and system testing.	1		
- When a test must be stopped, either to fix the program being tested or to change the test materials, that test run is concluded When the test is resumed after the change, record this as a new test run.  - Enter your name, date, team name, and instructor's name Name the part or assembly and its level Enter the cycle number.  - Date - Enter the date each test was run.  - Uniquely identify each test Use the same name or number as in the test plan.  - Name the product being tested.  Start - Enter the time when the test was started.  Stop - Enter the time when the test was stopped, either because it finished successfully or was aborted for any program or test-related reason.  Interruption Time - If the test was temporarily suspended for a reason not connected with the program, that is interruption time For example, the tester took a break.  Delta Time - The time between starting and stopping the test, less interruption time For example of test problem reports - If one or more problems is determined to be a defect, note that under comments.  Comments - Briefly note the test results. For example - the test finished successfully - the test was completed, but the result was incorrect - the test failed with 3 problems, 1 defect - where possible, give additional information on test results, test configuration, or anything else that would permit reproducing the	General	-	Use the log to track all unit, integration, and system testing.
tested or to change the test materials, that test run is concluded.  When the test is resumed after the change, record this as a new test run.  Enter your name, date, team name, and instructor's name.  Name the part or assembly and its level.  Enter the cycle number.  Date  Enter the date each test was run.  Test  Uniquely identify each test.  Use the same name or number as in the test plan.  Product  Name the product being tested.  Start  Enter the time when the test was started.  Stop  Enter the time when the test was stopped, either because it finished successfully or was aborted for any program or test-related reason.  Interruption Time  if the test was temporarily suspended for a reason not connected with the program, that is interruption time.  For example, the tester took a break.  Delta Time  The time between starting and stopping the test, less interruption time.  For example, the test problem reports  If one or more problems is determined to be a defect, note that under comments.  Comments  Briefly note the test results. For example  the test finished successfully  the test was completed, but the result was incorrect  the test failed with 3 problems, 1 defect  where possible, give additional information on test results, test configuration, or anything else that would permit reproducing the		-	A test run is an uninterrupted run of the test.
