Description:

TSPi Defect Recording Log Instructions – Form LOGD

Purpose	- Use this form to hold data on the defects you find and correct.
General	- Keep a separate log for each program component. - Record each defect separately and completely. - If you need additional space, use another copy of the form.
Header	- Enter your name, date, team name, and instructor's name. - Name the part or assembly and its level. - Enter the cycle number.
Date	- Enter the date you found the defect.
Number	- Enter the defect number. - For each program component (or module), use a sequential number starting with 1 (or 001, etc.).
Type	- Enter the defect type from the defect type list summarized in the top left corner of the log form. - See Appendix G for the defect type standard. - Use your best judgment in selecting which type applies.
Inject	- Enter the phase when this defect was injected. - Use your best judgment.
Remove	- Enter the phase during which you fixed the defect. - This will generally be the phase when you found the defect.
Fix Time	- Enter the time you took to fix the defect. - This time can be determined by stopwatch or by judgment.
Fix Defect	- If you or someone else injected this defect while fixing another defect, record the number of the improperly fixed defect. - If you cannot identify the defect number, enter an X in the Fix Defect box.
Description	- Write a succinct description of the defect that is clear enough to later remind you about the error and help you to remember why you made it. - If the defect was injected in a prior cycle, give the cycle number and put an * by the phase injected (i.e. code* or design*).
