LOC - new and changed	-	-
Test case LOC	-	-
Test material pages	-	-
Test results pages	-	-
รายงานการประชุม	99	12
Prototype	66	6
High Level Design	169	6

Comments

Purpose	- This form is used to provide weekly status information on the software configuration management (SCM) system.
General	- By regularly recording these measures, teams can judge the rate at which the product is stabilizing. - For example, in test, an historical record of the change activity can be used to project when the product will complete test.
Header	- Enter your name, date, team name, and instructor's name. - Name the part or assembly and its level. - Enter the cycle number.
Configuration Change Process Activity	Enter the indicated data for the current week and the development cycle to date. - the number of CCRs submitted to the CCB for approval - the number of CCRs approved by the CCB - the number of CCRs that the CCB has rejected (Note that rejected CCRs are not to be resubmitted.) - the number of CCRs deferred (Deferral is typically to obtain additional information.) - the number of CCRs outstanding (submitted and not yet approved, rejected, or deferred.) - the number of CCRs reversed (A reversed CCR is a change that was made and later found to be mistaken or based on incorrect information.)
Configuration Change Process Status	Give the current volume of product under configuration control. - Give the status as of the current week. - Also give the change in each measure from the prior week. For example - A total of 43 text pages (SDS) were submitted this week. - The total text pages under configuration control are 67.
Comments	Note any significant events or issues that came up during the week.
